

How safe is your data?

Get the safest and most reliable off-site backup solution on the market!

Common Causes of Data Loss

- Hard Drive Crashes
- Data Corruption
- Viruses
- Hackers
- Disgruntled Employees
- Theft
- Natural Disasters
- Fire
- Flood
- Human Error

The Facts

Your data is only as safe as its last backup copy. Your last backup is only as reliable as the person or device that made it. If your last backup was done one month ago, and your hard drive crashes, you will lose the last month's worth of data. Even if you run proper backups daily, unless you take the backups off-site on a regular basis, your data is still vulnerable to fire, flood, and other natural disasters.

The best and most reliable backups are completed *daily* and are stored off-site *daily*. The best way to achieve this is with an automatic remote backup solution.

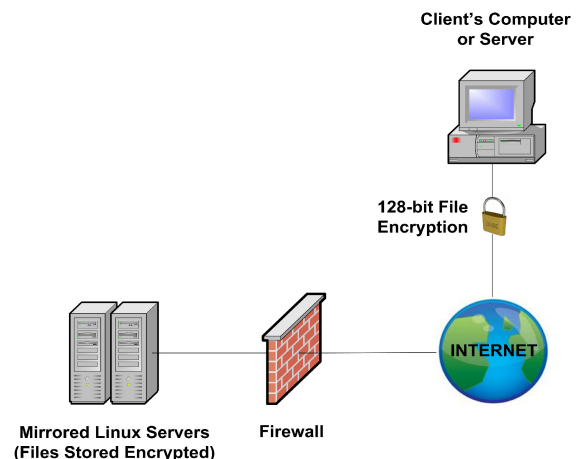

The Statistics

- 30% of all businesses that have a major fire go out of business within a year. (Home Office Computing Magazine)
- 31% of PC users have lost all of their files due to events beyond their control.
- 34% of companies fail to test their tape backups, and of those that do, 77% have found tape back-up failures.
- 60% of companies that lose their data will shut down within 6 months of the disaster.
- Companies that aren't able to resume operations within ten days (of a disaster hit) are not likely to survive. (Strategic Research Institute)

How Remote Backup Works

We will install and configure the backup software on your PC or server. After each work day has ended, the software will automatically take a copy of your important files, encrypt the copied files, and transmit them to our secure remote server for storage. Once the files are located on our remote server, they will be backed up again to a mirrored server for additional protection.

If you do experience data loss, recovering your files is as simple as downloading them back to your computer through the passworded software that we provide to you. Most customers can easily have their data back in place within an hour.

Service Advantages

- Backups are **automated**
 - Backup process runs with no human intervention
 - Backups are completed during non-business hours to avoid slowing down your internet connection during the work day.
- Files are **secure**
 - Data is secured with 128-bit encryption.
- Files are **off-site**
 - Protects your data from anything that may happen at your business location.
 - Backups occur daily, so you don't have to rely on one employee remembering to carry a backup off-site on a daily or weekly basis.

Service Affordability

150 MB Backup
\$9.95/month*

2 GB Backup
\$19.95/month*

4 GB Backup
\$24.95/month*

8 GB Backup
\$29.95/month*

*Paid annually. 20% more for quarterly or monthly billing
**Higher capacity plans are available upon request.
